RURAL HEALTH CLINIC CONFERENCE
May 22, 2020
Virtual Conference

The Rural Health Clinic Conference is a special meeting designed specifically for the rural health clinic members of the Mississippi Rural Health Association.

Due to the COVID-19 outbreak, this year’s conference will be held online. This new virtual conference style should best allow providers to stay in their offices / homes and safely view content without risk of exposure. The agenda will be a mix of practical discussion regarding COVID-19 as well as other needed topics specifically to support rural health clinics.

Visit msrha.org/events for more details and registration options.
COVID-19 Policy Changes on the State / National Level

The entire world has been shocked by the rise of the COVID-19 (coronavirus) in the last week(s). Many are infected, and several have died as of the writing of this article. The Mississippi Rural Health Association has worked with state and national agencies, along with a host of peer organizations, to develop and understand policy changes related to diagnosing and treating patients in this new time in American healthcare.

As of the time of this writing, the following are all known policy updates for state and national agencies, insurance carriers, and with regard to legislation. Certainly, things are changing quickly and we will respond to members as best as we can.

This should be used as a guide to assist providers with understanding the updates as they have been made. Please check your e-mail for any additional updates as they come out.

Mississippi Division of Medicaid (DOM)
The Mississippi Division of Medicaid (DOM) has added new procedure codes that can be used by providers and laboratories to bill for certain Coronavirus Disease 2019 (COVID-19) diagnostic to increase the testing and tracking of new cases.

The Healthcare Common Procedure Coding System (HCPCS) codes U0001 and U0002 were developed by the Centers for Medicare and Medicaid Services (CMS), and DOM is in the process of entering them into its claims processing system. They should be available for billing later this week, and they will apply to dates of service on or after Feb. 4, 2020. Providers will be notified once the codes are available in the system.

The HCPCS code U0001 is specifically used for CDC testing laboratories to test patients for SARS-CoV-2.

HCPCS code U0002 allows laboratories to bill for non-CDC laboratory tests for SARS-CoV-2/2019-nCoV (COVID-19).

The published fees for the two codes will be:

U0001 = $32.33
U0002 = $46.20

These fees do not include cutbacks, assessment fees, etc. Payment is not guaranteed.

For more information on the coverage or the evaluation and testing of COVID-19, find the following resources online:

Medicaid Updated Telehealth Regulations

In response to the coronavirus outbreak, the Mississippi Division of Medicaid (DOM) will expand its coverage of telehealth services throughout the state in alignment with Governor Tate Reeves’ recommendations on leveraging telemedicine to care for patients while limiting unnecessary travel, clinic visits and possible exposure.

Effective immediately through April 30, 2020, DOM’s Emergency Telehealth Policy will allow additional use of telehealth services to combat the spread of Coronavirus Disease 2019 (COVID-19). Details of enhanced services include the following:

• A beneficiary may access telehealth services from his or her home.
• A beneficiary may use his or her personal cellular device, computer, tablet, or other web camera-enabled device to seek and receive medical care with a qualified distant-site provider.
• The requirement for a telepresenter to be present with the beneficiary is waived when the beneficiary receives telehealth services in the home.
• Any provider that is eligible to bill DOM for services is now allowed to serve as a distant site provider, including Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs).
• Any limitation on the use of audio-only telephonic consultations is waived.

These enhanced telehealth options will be available in fee-for-service Medicaid, Medicaid managed care, and the Children’s Health Insurance Program.

The agency also is seeking federal approval for an 1135 Medicaid waiver to give the program a wider range of flexibilities during the emergency. If approved, the 1135 waiver would give DOM the discretion, when necessary and proper, to relax prior authorization requirements, eliminate Pre-admission Screening and Annual Resident Review (PASRR) reviews at nursing homes, suspend revalidations for current providers, and expedite new provider enrollment.

Other requested Section 1135 flexibilities include allowing care to be provided in alternative settings, revising rules for critical access hospitals, and relaxing telehealth security requirements so that providers can use readily available platforms like Facetime and Skype to facilitate telehealth visits with patients.

Additional information on policies, coding, and reimbursement related to the COVID-19 outbreak will continue to be added to a resource page on the agency’s website. Note: To confirm, this now allows RHCs and FQHCs to be a distance site provider for Medicaid-
Blue Cross Blue Shield of Mississippi

In response to the COVID-19 pandemic, Blue Cross & Blue Shield of Mississippi is ensuring expanded access to care, to include enhanced telemedicine coverage. This is important given the nature of the COVID-19 outbreak and the Centers for Disease Control and MS State Department of Health direction to self-isolate, not use the emergency room and call your primary care provider. Effective March 16, 2020, the BCBSMS COVID-19 Pandemic Telemedicine Policy allows Healthcare Providers to provide medically necessary services that can be appropriately delivered via audio and/or visual consultation. The BCBSMS COVID-19 Pandemic policy is effective March 16, 2020 through April 30, 2020, and will be reassessed as needed.

Specific guidelines are noted below:

- **Telemedicine**, in this Policy, is appropriate for visits for either low complexity, routine or ongoing evaluation and management for established patients, as well as addressing new and established patient needs related to COVID-19 symptoms.
- Member cost-sharing (co-pays, deductibles, etc) and benefit levels will apply according to the Blue Cross and Blue Shield Member’s Health and Wellness Benefit Plan. BCBSMS will waive the co-pay for all Network Provider covered telemedicine visits for fully-insured Members.
- For routine evaluation and management of established patients, Healthcare Providers (MDs, DOs and professional Allied Providers, such as Nurse Practitioners) may bill for established patient evaluation and management codes up to a Level 3 (CPT codes 99211, 99212 and 99213) with a place of service 02 (Telehealth), regardless if provided telephonically or using visual equipment. Please note, however, providers should only bill for telephonic visits when the provider speaks directly to the patient. Providers should not bill BCBSMS for services when only office staff and/or a nurse speaks with the patient, regardless if a provider was consulted.
- Behavioral Health Providers (Psychiatrists, Psychologists, Licensed Professional Counselors, and Licensed Certified Social Workers) may bill for established patient visits and evaluation and management codes as follows with a place of service 02 (Telehealth): - CPT codes 99211, 99212 and 99213 - CPT code 90832
- All services must be medically necessary and documented as part of the Member’s permanent health record, to include the amount of time spent with the patient. Patient must give consent to be treated virtually and/or telephonically and appropriately documented in the medical record prior to initiation of telemedicine.
- This policy only applies to medically necessary visits that are patient-initiated or are replacing a previously scheduled visit.

**Mississippi Board of Medical Licensure (MSBML)**

The Mississippi Board of Medical Licensure created recent policy changes that are in effect during the Governor’s State of Emergency:

1. Providers are highly encouraged to utilize telemedicine whenever possible for treating patients to avoid unnecessary clinic visits and possible exposure.
2. The Mississippi Board of Medical Licensure shall allow non-Mississippi licensed physicians to provide telemedicine within Mississippi.
3. Urine drug screens are not required for controlled substances, but use of the MPMP is still enforced.

**Mississippi Board of Nursing (MSBN)**

The Mississippi State Board of Nursing created recent policy changes that are in effect during the Governor’s State of Emergency:

1. APRNs are highly encouraged to utilize telemedicine whenever possible for treating patients to avoid unnecessary clinic visits and possible exposure.
2. Non-Mississippi licensed APRNs with an unrestricted out of state licensure are allowed to provide telemedicine within Mississippi.
3. Point of service drug testing is not required for controlled substances, but use of the MPMP is still enforced.

**Mississippi State Department of Health (MSDH)**

Prior approval from MSDH for submission of samples to the Mississippi Public Health Laboratory is no longer required.

**Centers for Disease Control and Prevention (CDC)**

CDC Infection Control Guidance: This updated guidance from the CDC provides updated PPE recommendations for the care of patients with known or suspected COVID-19.

- Facemasks are an acceptable alternative to N95 respirators when respirators are unavailable in healthcare settings. Respirators should be prioritized for procedures that are likely to generate respiratory aerosols.
- When an adequate supply of respirators is available in a healthcare facility, facilities should return to use of respirators per their respiratory protection program.
- Continue to use eye protection, gown, and gloves.
- If there is a shortage of gowns, they should be prioritized for aerosol-generating procedures, high contact patient care activities, and activities where splashes and sprays may occur.
- Patients with known or suspected COVID-19 should be cared for in a single-person room with the door closed. Airborne Infection Isolation Rooms (AIIRs) (See definition of AIIR in appendix) should be reserved for patients undergoing aerosol-generating procedures.

**LabCorp**

- LabCorp is accepting COVID-19 test orders and samples from physicians and other healthcare providers, clinics, and hospitals anywhere in the U.S. We are processing tests in the order received.
- COVID-19 tests can be ordered directly from LabCorp. We are not aware of any requirements that state or local health authorities must provide approval for LabCorp to perform testing. However, healthcare providers who are evaluating or treating patients under suspicion for COVID-19 may be required to coordinate
LabCorp is reporting COVID-19 test information to non-CAH swing-bed hospitals to move patients from their FQHC to bill for Medicare telehealth visits or e-visits.

CMS issued a Section 1135 waiver to allow CAHs and rural Clinics (RHC) or Federally Qualified Health Centers (FQHC) distance site providers for telehealth. We are helping utilization review processes in rural hospitals to better facilitate patient transitions to appropriate settings. The expanded waiver does not apply to Rural Health Centers for telehealth.

Medicare will pay doctors and hospitals for a broad range of telehealth services, through remote communications technologies. Some of these technologies, and the manner in which they are used by HIPAA covered health care providers, may not fully comply with the requirements of the HIPAA Rules. OCR will exercise its enforcement discretion and will not impose penalties for noncompliance with the regulatory requirements under the HIPAA Rules against covered health care providers in connection with the good faith provision of telehealth during the COVID-19 nationwide public health emergency. This notification is effective immediately.

A covered health care provider that wants to use audio or video communication technology to provide telehealth to patients during the COVID-19 nationwide public health emergency can use any non-public facing remote communication product that is available to communicate with patients. OCR is exercising its enforcement discretion to not impose penalties for noncompliance with the HIPAA Rules in connection with the good faith provision of telehealth using such non-public facing audio or video communication products during the COVID-19 nationwide public health emergency. This exercise of discretion applies to telehealth provided for any reason, regardless of whether the telehealth service is related to the diagnosis and treatment of health conditions related to COVID-19.

Medicare for Medicare and Medicaid Services (CMS)

CMS will pay doctors and hospitals for a broad range of telehealth services on a temporary basis, effective March 6. The program will pay for office and hospital telehealth visits and include a wide range of providers including nurse practitioners, clinical psychologists and social workers. Telehealth visits will be reimbursed for the same amount as in-person visits.

New Guidance

CMS issued a Section 1135 waiver to allow CAHs and rural (non-CAPH) swing-bed hospitals to move patients from their acute care beds to swing beds for extended care services without a 72-hour prior hospitalization. This clarification will help utilization review processes in rural hospitals to better utilize medical provider capacity.

Note: The expanded waiver does not apply to Rural Health Clinics (RHC) or Federally Qualified Health Centers (FQHC) distance site providers for telehealth.

Department of Health and Human Services (HHS)

During the COVID-19 national emergency, which also constitutes a nationwide public health emergency, covered health care providers subject to the HIPAA Rules may seek to communicate with patients, and provide telehealth services, through remote communications technologies. Some of these technologies, and the manner in which they are used by HIPAA covered health care providers, may not fully comply with the requirements of the HIPAA Rules. OCR will exercise its enforcement discretion and will not impose penalties for noncompliance with the regulatory requirements under the HIPAA Rules against covered health care providers in connection with the good faith provision of telehealth during the COVID-19 nationwide public health emergency. This notification is effective immediately.

A covered health care provider that wants to use audio or video communication technology to provide telehealth to patients during the COVID-19 nationwide public health emergency can use any non-public facing remote communication product that is available to communicate with patients. OCR is exercising its enforcement discretion to not impose penalties for noncompliance with the HIPAA Rules in connection with the good faith provision of telehealth using such non-public facing audio or video communication products during the COVID-19 nationwide public health emergency. This exercise of discretion applies to telehealth provided for any reason, regardless of whether the telehealth service is related to the diagnosis and treatment of health conditions related to COVID-19.

Congressional Action

The US Senate released its version of the Phase 3 COVID-19 Stimulus Package, which includes language to make RHCs and FQHCs distance site providers for telehealth. We are working to ensure that all needed language is included. This bill is expected to come up for vote in the coming week. In our last conversation with them, all Mississippi delegates are in favor of including these entities as distance site providers for telehealth.

MRHA PARTNER RELEASES BOOK FOCUSED ON HOSPITAL SURVIVAL

“Rural Hospital Renaissance” gives Nation’s Struggling Rural Hospitals Pathway to Growth and Revival. A new book and survival assessment tool provide at-risk hospitals with a blueprint for engaging leadership, staff and patients to reverse the epidemic of closures and start growing. A fifth of the nation’s rural hospitals are nearing collapse, according to North Carolina’s Sheps Center for Health Services Research, and 2019 is on pace to record the highest number of closings ever.

With rural hospital closures at a crisis point, finding the pathway back to growth has never been more urgent. “Rural Hospital Renaissance,” the new book by Brian Lee, one of North America’s leading experts in the field of Five Star patient experience, offers rural hospitals a proven formula for achieving a breakthrough in the patient experience to transform their future prospects from decline and survival to growth and revival. “A cultural renaissance is needed in healthcare today,” says Lee, of the industry’s renewed focus on improving the patient experience. ‘The magic takes place when leaders truly engage the frontline with a 'License to Please' bundle of empowerment skills that transform their task-driven efforts to mindful presence and kindness. This book provides a step-by-step blueprint for transforming hospital culture and engaging caregivers to create a healing experience that patients will enthusiastically recommend.”

RURAL STUDY BEINGS OUTREACH, COMMUNITY ENGAGEMENT IN NORTH MISSISSIPPI

Researchers from UMMC and partner institutions announced in May 2019 the Risk Underlying Rural Areas Longitudinal Study, or RURAL, which will examine what causes the high burden of heart, lung, blood and sleep, or HLBS, disorders in the Southern Appalachia and Mississippi Delta regions. With funding from the National Heart, Lung, and Blood Institute and led by Boston University, the six-year, $21.4 million multi-site prospective cohort study plans to recruit 4,000 participants from 10 of the most economically challenged rural counties in those areas.

“We are going to look at a rural population cohort – a cohort that’s never been successfully studied at this scale,” said Dr. Ervin Fox, professor of medicine and principal investigator for the Mississippi sites.

Additional RURAL investigators in Mississippi include Dr. Frances Handerson, consultant; Dr. Felicia Caples, project administrator; Dr. Sonia Fuqua, consultant; and Abril Grant, research specialist. RURAL plans to use a mobile examination unit, wearable activity monitors and smart phones to assess familial, lifestyle, behavior and medical histories. In addition to considering environmental and economic factors, they will also study standard and novel risk factors for HLBS disorders.

RURAL plans to recruit its Mississippi cohort from Oktibbeha and Panola counties. A mobile exam unit will visit each county and serve as the site where RURAL investigators will conduct the participant exams.

“We hope to recruit people from Como, Crenshaw, Courtland, Sardis, Pope, Maben, Sturgis and all throughout Panola and Oktibbeha counties. We want this study to be representative of these communities,” Fox said.

The Mississippi Core Team for RURAL has engaged the community through focus groups, stakeholder meetings and the formation of a community advisory board for each county. The board members will serve as liaisons between the RURAL study and the community.

In addition, the RURAL study and community advisory boards co-hosted Go Red for Women heart health events in Panola and Oktibbeha counties in February, which introduced attendees to RURAL and its goals. The community advisory boards and the Mississippi Core of RURAL will continue participating in heart education events, connecting with community partners and businesses, and working with faith-based organizations and health care facilities to promote the study. There will be periodic public announcements regarding RURAL. The study plans to start recruitment and expects the arrival of the mobile exam unit to Oktibbeha and Panola counties in 2021.
Lackey Memorial Hospital’s Newest Service Line Addresses the Opioid Crisis
By: Nicole Kennedy

These days it is tough to turn on the news without being confronted with our country’s ongoing struggle with opioid dependency. Sadly, it’s an epidemic that many of us have experienced first-hand because it affects our family members, friends, and coworkers. Virtually everyone we interact with in our daily lives could fall victim to the misuse of prescription pain medications. Opioid dependency is not bound by race, gender, or even social stature.

Opioids are often prescribed to treat moderate-to-severe pain following surgery, injury, or chronic health conditions. However, these drugs can also be so potent that many people become dependent before they are even aware of what is happening to them. The epidemic is so widespread that accidental drug overdose is currently the leading cause of death in the United States for those under 50. Lackey Memorial Hospital is taking a stand and addressing the crisis. Their Main Street Medical Clinic of Morton has recently incorporated an Opioid Dependency Treatment Program that offers a comprehensive solution to opioid addiction and abuse. The innovative treatment plan is physician administered and monitored by Doctor Matthew Bentley. According to Dr. Bentley, “The medication-assisted treatment plan is a safe, effective, and confidential way to beat opioid dependency.” He continues, “Our medication program binds to the same receptors in the brain as other opioids, but blunts intoxication and prevents cravings – allowing our patients to transition back from a life of addiction to a life of normalcy and safety.” Lackey Memorial Hospital’s Opioid Dependency Program is covered by most insurance plans. The referral process is extremely easy. In fact, self-referrals are accepted and completely confidential. The clinic is located conveniently between Jackson and Meridian. If you or a loved one is struggling with opioid dependency, make the call and get the medical attention necessary to get your life back. You can reach the Opioid Dependency Treatment Program at 601-732-1524. Treatments are scheduled within the Main Street Medical Clinic of Morton at 347 South Fourth Street. To learn more about the program visit lackeymemorialhospital.com

FIVE MISSISSIPPI RHCS AWARDED TOP RURAL HEALTH CLINICS BY LILYPAD®

Lilypad®, a leading healthcare analytics firm, recently announced the 2020 Lilypad Awards, the first and only ranking program for our nation’s 4,400 rural health clinics. Five rural health clinics in Mississippi were distinguished with this award. These clinics include the Family Medical Group of Meadville, South Central Regional Medical Center Clinic in Laurel, Sunflower Rural Health Clinic in Ruleville, EMS Clinic in Greenwood, and Holmes County Family Medicine Clinic in Lexington. The Lilypad Awards recognize the Rural Health Clinics that outperform their rural primary care practice peers in terms of efficiency and operational excellence. Utilizing data from the Centers for Medicare and Medicaid program to calculate rural-relevant metrics across five domains, the Lilypad Awards provide a comprehensive and objective assessment of rural health clinic performance. The Lilypad Awards and Lilypad’s Practice Operations National Database (POND®) programs are used nationally by rural clinics, State Offices of Rural Health, regional healthcare systems and rural hospitals to measure and monitor rural primary care practice performance. They serve as the foundation for several state and national rural primary care performance improvement initiatives. In many cases Rural Health Clinics receive enhanced reimbursement from government payers such as Medicare and Medicaid as a means of sustaining financial solvency. Rural Health Clinics must meet one or more healthcare shortage designations to be eligible for the program and generally are categorized as either provider-based (hospital-owned) or independent.

The Lilypad Awards evaluate both provider types to produce a comprehensive ranking system for every Rural Health Clinic in the nation. The Top Five organizations in each of five geographic regions have earned the 2020 Lilypad Award Top Clinic recognition. The full list of clinics that have earned 2020 “Lilies” is available at the Lilypad website and are listed in the Addendum to this press release.

“We’re proud of the work that NOSORH, the fifty State Offices of Rural Health and our partners are doing to support these crucial and dedicated rural providers. Rural health clinics around the nation are stars of serving underserved communities; and they need all the resources, data and support we can find to continue their efforts to serve small populations in small towns across the country. Congratulations to all Lilypad Award recipients for exemplifying the power of rural,” said Teryl Eisenger, Chief Executive Officer of the National Organization of State Offices of Rural Health.

The Mississippi Division of Medicaid recently announced that rural health clinics in Mississippi will receive a 1.9% increase in reimbursement for Medicaid encounters. This rate increase will go into effect beginning January 1, 2020 for all RHCs in the state. This reimbursement was initially passed by Congress and was funneled down through the Mississippi Division of Medicaid accordingly. All clinics should have received a notice from the Division stating the increased rate and their new AIR including the 1.9% increase.

Go to: yallpolitics.com/2019/12/20/medicaid-signs-off-on-federal-reimbursement-for-rural-clinics

For questions, contact Joe Jackson with the Division of Medicaid at 601.359.4040.
The U.S. Department of Labor announced that Dr. Laurie Todd-Smith is now the Director of the Department’s Women’s Bureau.

“Dr. Laurie Todd-Smith has dedicated her life to delivering crucial workforce education in her community,” said U.S. Labor Secretary Eugene Scalia. “As we approach the 100-year celebration of the Women’s Bureau, Dr. Todd-Smith will play a leading role in shaping our continued efforts to help women enter and succeed in the American workforce.”

A former Executive Director of the State Workforce Investment Board and State Early Childhood Advisory Council in Mississippi, Dr. Todd-Smith played a leading role in the creation of the Family-Based Unified and Integrated State Plan. She also served as a Senior Education Policy Advisor to Governor Phil Bryant and was an adjunct faculty member and researcher at Mississippi State University. Dr. Todd-Smith started her career as an elementary school teacher.
The Centers for Medicare & Medicaid Services (CMS) today released a Request for Information (RFI) that seeks input on opportunities to improve health care access, quality, and outcomes for women and infants before, during, and after pregnancy in rural communities. Responses to this RFI will be used to inform future work by CMS toward the development and refinement of programs and policies that allow rural families access to high quality health care that results in improved health outcomes.

The RFI can be accessed at go.cms.gov/ruralhealth. Comments will be accepted through April 12, 2020 at 11:59 PM EDT.

CMS Administrator Verma also posted a blog describing CMS’s efforts to address rural health. The blog is attached and available at cms.gov/blog/rethinking-rural-health-maternal-and-infant-health-rfi

Results from the Southeast (Region B) are below:

Congratulations to the five Mississippi clinics to receive the award!

The digitization of information in today’s healthcare industry has improved services and patient care delivery but unfortunately it has also spawned some serious side effects: cybersecurity attacks and breaches. Today’s IT departments must be vigilant in identifying network vulnerabilities before they are targeted by cyber attackers. Running regular security audits for your organization is a must – here’s why.

1. **Identify Critical Weaknesses in Your Cyber Security Protections**

   The first step in any strategic security plan is to know your risks. Security assessments use a variety of techniques and tests to conduct an in-depth audit of your organization’s defense measures against various attack methods used by intruders – internal or external. This could be an attacker targeting your network from the outside, a disgruntled employee seeking revenge, or malware. For example, WannaCry proliferated as a result of unpatched software common in many businesses. An assessment identifies those unpatched systems, enabling your team to update software and reduce risk.

   An assessment’s goal is to identify hidden vulnerabilities, loopholes, and potential gaps in your security architecture. Results will detail everything from shared and accessible access credentials and software version updates needed, to a detailed review of how sensitive information was accessed by analysts – and a presentation of the specific data found. Identification is only step one, though. Security assessments also provide healthcare organizations with a rating of risk severity for each vulnerability, guidance for remediating each identified vulnerability, and the opportunity to retest to assess your remediation efforts.

2. **Ensure Sensitive Data is Secured in Your Local Environment**

   All protected health information (PHI) and electronic PHI (e-PHI) that a healthcare organization creates, receives, maintains, or transmits must be secured and protected. Additionally, all methods of storing and transferring PHI, including databases, servers, connected medical equipment, mobile devices, and cloud storage, need to be regularly evaluated.

   Security assessments can routinely test if implemented security measures are properly protecting sensitive and confidential information from all potential points of attack. A range of service options are available, including internal and external penetration testing, database security assessments, and web application testing.
